

Technical specification

Low carbon steel wires - for automotive, building and engineering industry.

Parameters of the wire and the packing :	
Diameter:	1,00 – 3,8 mm
Tensile strength:	min. 700 MPa; max. 1400 MPa
Surface:	Not coated, residual lubricant after drawing
Further parameters according to the requirement of the customer	
Packing:	coils <ul style="list-style-type: none">• Z2 coils, weight of coil: app.450 kg, two coils on the wooden pallet 750 x 750 mm• Z3 coil, weight of coil :1000-1800 kg, one coil on the pallet 750 x 750 mm or 800 x 1200 mm
	

Parameters of wires can be adopted according to the customer needs and requirements.
